Julian Craigwell-Graham

Chicago, IL

919-432-8119 - jccraigw@gmail.com - https://github.com/jccraigw - http://jdotgraham.com/

Professional Summary

I have always been one to put more than the necessary effort to get the job done. Give me an ambiguous project or late request on a Friday and I'll be the one to immerse myself fully in the outcome needed. In my current role, I seize the opportunities to work on challenging assignments. I'm always intrigued by what is possible through code and know that my ability to solve problems is an asset in the field.

Skills

JavaScript, Apex, TypeScript, Ruby, HTML5, CSS3, Less, Sass, SQL, NoSQL, Node.js, Express.js, MongoDB, React Js, Angular 4, HTTP, Git, and Gulp.

Work Experience

1/18 - Present **Developer**
Appiphony, Chicago, Illinois

Salesforce ISV Application Development
- Responsible for technical planning, data modeling, process flow charts, and full stack development of all features.
- Develop and implement unit testing insuring code quality and coverage.
- Technical documentation of all features implemented for client handoff.
- Production packaging of all code for use in the app exchange.
- Providing technical client support during development cycle.

9/17 - Present **Teaching Assistant**
Northwestern University School of Professional Studies, Chicago, Illinois

- TA for part-time data science bootcamp teaching students data analytics and visualization.
- TA for full-time coding boot camp teaching students full-stack web development (MERN Stack).

5/17 - 8/17 **Student**
General Assembly, Chicago, IL
A 13-week full-stack web development program focused on common best practices in object-oriented programming, MVC frameworks, data modeling, and test-driven development.

5/08 - 5/17 **Applications Developer**
SAS Institute, Cary, North Carolina

Lead System Administrator for Dynamics and Replicon Enterprise Resource Planning (ERP) systems
- Develop, test, promote and implement code along with overseeing completion and maintenance of best practices for code promotion processes within the ERP system.

Department Website Redesign
- Designed and coded with HTML5, CSS3, and JavaScript based on stakeholder specifications which improved navigation and performance of the site.
- Conducted cross-functional research and usability testing with end users which concluded in a reduction of broken links, faster navigation, and responsive design.

File Decryption Automation
- Developed web based forms to automate the process by creating a text file with user's request to be evaluated by the electronic data interchange server script. Coded with HTML, CSS, JavaScript and PHP.
- Automated a repetitive task that required a manual response and significantly reduced the waiting time between request and received from hours to minutes.

Education

North Carolina State University
Bachelor of Science, Textile Engineering
Certification in Computer Programming (Java)

General Assembly
Web Development Immersive
